

Wrap Plugin Samples

Alignment Possibilities

This text is center aligned 100%

This text is right aligned 100%

This text is center aligned 50%

This text is right aligned 50%

Fun with Columns

This is data in the first column, and will wrap as needed depending on the screen width, so should float nicely.

This is data in the second column, and will wrap as needed depending on the screen width, so should float as nicely as the first column.

This is data in the third column, and will wrap as needed depending on the screen width, so should float as nicely as the first two columns did.

Note to use half for 2 columns, third for 3

Fun with Indentation

Note in these samples “ \” at the end of the line forces a line break.

This line is indented

So is this line

Fun with Outdentation

This line is outdented
So is this line

Fun with Prewrap

```
This is a prewrap code box that  
is fun to the point of making  
Bill Whisman have a beer
```

Fun with making a link look like a Button

[WMU](#)

Some more info about boxes

Some are available in the wrap edit line

This text will be in a standard rounded box and will wrap around as needed using the size 400px and floats left

This text will be in a standard rounded box and will wrap around as needed using the size 400px and floats right

This text will be in a standard rounded box and will wrap around as needed using the size 400px and floats left

This text will be in a standard rounded box and will wrap around as needed using the size 400px and floats center

This text will be in a standard rounded box and will wrap around as needed using the size 400px and floats left.
